

Oakland County Michigan Map Atlas

Introduction

A Geographic Information System (GIS) is a collection of computer hardware, software, and geographic data used for capturing, managing, analyzing, and displaying all forms of geographically referenced information. With a geographic information system, you can link information (attributes) to location data, such as people to addresses, buildings to parcels, or streets to a network. You can then layer this information to give you a better understanding of how it all works together.

Oakland County continues to advance the use of GIS technology in its daily activities. The use of this technology is a critical part of public safety, tax and assessment, environmental quality, planning, and economic development functions.

GIS Day provides an international forum for users of GIS technology to demonstrate real-world applications that are making a difference in our society. More than 70 countries will hold local events such as corporate open houses, hands-on workshops, community expos, school assemblies, and more.

In recognition of GIS Day 2006, Oakland County and several local units have assembled the collection of maps in this book as evidence of how GIS applications help to describe and solve local government problems. Our thanks go out to those who contributed to this collection.

November 2006

Table of Contents

Cadastral Maps

- Waterford Township, Section 30, Sheet 4010
- Waterford Township, Section 30, Sheet 4011
- City of Wixom, Section 28
