

How To Remove and Clean Aerators

An aerator is the screen on the end of a faucet. It is important to remove and clean it every six months, or after any plumbing work. Here are the steps to clean an aerator:

1. Unscrew the aerator from the faucet
2. Check for debris caught in the aerator
3. Soak parts in vinegar
4. Rinse and reassemble the aerator
5. Reattach the aerator to the faucet
